American Precision Prototyping Debuts Powerful New Online Quote System

-Leading RP&M Provider Enhances
Online Quote System for Customers

Tulsa, Oklahoma, January 12, 2009 – American Precision Prototyping, LLC. (APP), an industry-leading service bureau that provides fast, high-quality Rapid Prototype and Rapid Manufactured parts announced today the debut of additional enhancements to their recently redesigned online quote system.

APP has been providing customers the convenience of online quoting and part purchasing since their inception in 2002. Last year, APP successfully debuted to their customers a slick redesigned website and online quote system. This year APP customers are getting what they asked for; a new ramped up, power packed version with enhancements to spare.

The most powerful new tool for APP customers is the multiple service quoting/ordering features. This allows customers to quickly and easily quote and order any combination of additive fabrication services APP has to offer. This tool will reduce the amount of time needed for quoting and ordering and is available for both instant and manual quotes. The list of instant quotable services has also expanded. Customers can now receive instant online quotes for polyjet and cast urethanes in addition to SLA, SLS and FDM.

Several other new features designed to enhance their customers' quoting/order experience include shipping insurance, real time shipping quotes from FedEx and UPS and the ability to upload other file types in addition to STL files. Customers will now be able to upload any type of 3D CAD files, drawings and even supporting documents like .pdfs for manual quotes. The real time FedEx and UPS shipping quotes ensure customers have accurate shipping costs before ordering

parts so there are no surprises when they receive the invoice. The shipping insurance option available to customers is unlike the standard shipping insurance offered by most freight carriers. The insurance offered by APP will cover the full replacement of the parts rather than just a portion of the declared value of the package. This gives participating customers the security of knowing their parts are protected should something happen during transit.

An additional benefit to the customer is an expanded profile section. Customers can now store multiple shipping and billing addresses, multiple shipping accounts and they can manage their security question and answer and password.

APP prides itself on listening to and giving customers exactly what they ask for, stated Jason Dickman, president of APP. Our customers asked for something more powerful and we have delivered. More instant quotable services, enhanced account tools and additional online quoting tools will make their online experience faster and more thorough. We think our customers will also be pleased to know this is just the beginning as we will have more features coming online later this year, concluded Dickman.
