

## Architectural Models

Authentic looking scale models.

**Architectural Models** allow architects, architectural students, builders and designers the opportunity to bring their computer generated models to life complete with all design features, textures, even furniture as modeled. Direct Digital Manufacturing provides many avenues for various types of models from simple exterior models used to verify overall design to detailed interactive models used to check both exterior and interior features. Using the latest in model detailing techniques, textures can be applied to mimic those of stone, tile, brick, stucco and other textured building materials. Our master painters can make your project come to life with vivid, realistic paint colors and can match to a specific pantone color if the project calls for such. Projects can be completed to your specifications within weeks. Architectural models are useful tools for selling design services, communicating effectively with clients and can be used as display models.

### Build Specifications

Pantone colors available upon request  
Textures & other finishing techniques available  
Conversion from blueprints to 3D model

### Models Available

- Exterior Models
- Topography Models
- Interior Models
